Compound Security Systems Ltd

VOID**alarm**

EMERGENCY SHORT TERM SECURITY

VOID**alarm** is a completely self contained electronic security system in a box.

CSS have developed VOID**alarm** as a short term emergency security tool that can be implemented within minutes at any location in order to provide 'stop gap' security to properties that have been damaged, burgled or for any other reason are without power and / or telephone connection.

Built for internal and external use

system carry case with in-built control unit

wireless PIR sensors

wireless key switch with comprehensive tamper protection

Void Alarm consists of the following:

- Self contained power supply (6 months upgradable to 12 months)
- GSM dialler (programmable with up to 10 mobile numbers)
- Remote key switch (Arm / Disarm)
- 2 Externally rated PIR's (upgradable to 30 PIR's) with 2000 feet (600 meters) range
- High impact IP65 Carry case
- Automatic daily system status report messages

Implementation / Operation (10 minutes)

Step 1   Remove PIR's from case and mount at desired locations

Step 2   Program mobile number(s) into control unit via SMS message

Step 3   Remove Remote key switch from case and mount by entrance / exit

Step 4   Switch unit on inside case

Step 5   Hide control case within the site

Step 6   Arm system on leaving the site via the Arm / Disarm switch

System will send confirmation Arm message to numbers programmed into the system.

Any activation of the system will alert ALL mobile numbers programmed into the system.
